

Project Executable Files

Date	30 June 2026
Team ID	
Project Name	Opti Crop: Smart Agricultural Production Optimization Engine
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	N/A
5	Environment configuration file	N/A
6	Deployed application URL (if hosted)	N/A
7	APK/Executable binary	N/A
8	Dockerfile / Containerization config (if applicable)	N/A
9	Test files and test results	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
OptiCrop-Smart-Agricultural-Production-Optimization-Engine/
├── dataset/
│   └── Crop_recommendation.csv
├── model/
│   └── crop_model.pkl
├── notebook/
│   └── OptiCrop.ipynb
├── static/
│   ├── css/
│   │   └── style.css
│   └── images/
├── templates/
│   ├── home.html
│   ├── about.html
│   ├── findyourcrop.html
│   └── result.html
├── app.py
├── requirements.txt
└── README.md
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	N/A
Login Credentials (Demo)	NA
Platform/Hosting Provider	NA
Repository Link	NA
Demo Video	NA

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

- Python 3.8 or above
- Required packages (see *requirements.txt*)

Step 1: Clone the repository

```
git clone <repository-url>
```

Step 2: Navigate to the project directory

```
cd OptiCrop-Smart-Agricultural-Production-Optimization-Engine
```

Step 3: Install dependencies

```
pip install -r requirements.txt
```

Step 4: (If *.env.example* exists) copy and configure environment variables

```
copy .env.example .env
```

Update the *.env* file if required.

Step 5: Run the application

```
python app.py
```

Step 6: Open browser and go to

```
http://127.0.0.1:5000
```

The application will be running locally.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Runs only on local machine	Can be deployed in future
2	Uses static dataset	Dataset can be updated
3	No user authentication	Can be added later
